PRECISION SPRAY-AEROFOCUS TECHNOLOGY

All over the world,
every day, billions of people are
SPRAYING. On their face, in
their hair, under their arms, all
over their body, in the air, onto
the walls, in the garden,
everywhere. Spray
technology extends to
almost every aspect of
our lives.

PRECISE
SPRAYING WITH
MONO AND DUO

WWW.AERO-FOCUS.COM

precision spray

However, what isn't everyday, our new technology in the field of spraying. Pronova has launched AeroFocus Technology, a method to spray **precise and focussed** amounts of product. Ideal for covering small surfaces or the face. AeroFocus technology comes in two devices. MONO & DUO.

"Both products are unique in their ability to spray precise and limited amounts of product from an aerosol. While other aerosol continuous valve systems mostly spray wide and large amounts of product, the AeroFocus technology is developed especially to cover the small and precise spots. "AeroFocus technology sprays nearly 10% of standard aerosols and is, therefore, unique in comparison to any other aerosol valve system." The low emission of Aerofocus Technology contributes to a more sustainable aerosol industry.

POSITIVE IMPACT
ON THE ENVIRONMENT

Aerofocus Mono. One of a kind

Another first, the world's smallest aerosol spray. Unique AeroFocus technology enables precise and accurate spraying, while limiting the amount of product being sprayed. In other words, unlike other spray systems, it doesn't spray all over the place! Ideal for applying your product, when it's being sprayed directly onto the face, or on very small surfaces.

Holding the device with just two fingers, you can effortlessly spray your product on exactly the spot that it's intended.

The spray can easily be activated by pressing on the side

Mono spray nozzle can be customized to suit your product in the best possible way

**SPRAY
SMALL**

Aerofocus Duo. Two of a kind

AeroFocus DUO offers game-changing new technology and a very good reason to choose your product rather than the competition.

AeroFocus DUO is the world's first aerosol dispenser that produces two different spray rates from just one device. This revolutionary dispenser can switch from small to large volumes of your product with just one 180° turn.
